

BCX Ultra Foot Bath

The most advanced ionic detoxification system

Detoxification through the largest organ of the body, the skin, can be traced back thousands of years to Eastern Indian traditions of Ayurvedic medicine, and ancient Rome. Both cultures used a system of healing that employed salt water baths to draw out impurities from the body. Today, we build on this time-tested principle of healing through salt water baths and incorporate ionization. Through sophisticated quality instruments, like the BCX Ultra Foot Bath, we too can achieve the health benefits like our ancestors, yet in a shorter period of time, and often with dramatic results. Our feet have over 7200 nerve endings and 200 sweat glands along with a system of many arteries and veins which cross paths in the feet. These factors make the feet a natural gateway for the disposal of waste products.

Detoxification through Foot Baths assists the body to:

Excrete heavy metals
Balance pH levels

Reduce inflammation
Enhance the immune system

BCX Ultra Foot Bath instrument is the most advanced ionic foot bath on the market today. It is designed for healthcare professionals and clinics, yet user friendly and suitable for home use. It can be utilized as a stand-alone unit, or interfaced with the BCX Ultra. This is the only unit in the world that has the capability to interface the time-honored tradition of foot baths with the power of Rife frequencies. Incredible, but true! Enjoy a foot bath while running detox frequencies on the BCX Ultra. These complementary therapies provide a means to disgorge toxins thereby diminishing the herxes.

The BCX Ultra Foot Bath is available with stainless steel or premium titanium electrodes. Standard electrodes produce the characteristic scum and discolored water, typical of foot bath units. The noticeable change in the color of the water is not detoxified cellular waste and impurities. This is a misconception. It is a result of oxidized metals released from stainless steel electrodes during electrolysis. Our premium, titanium electrodes, exclusive to the BCX Ultra Foot Bath, practically eliminates the discharge of oxidized metals. The result.... foot bath water remains relatively free of unwanted heavy metals. After all, do you want to absorb metals, the very toxins you are trying to excrete?

Capitalize on your largest detoxification pathway- the skin. Rebalance the body; relieve muscle strain, and increase performance and quality of life.

Proudly made *and* serviced in the U.S.A. We offer one of the best warranties in the business, by the longest-lived manufacturer of Rife equipment!
